INSTALLING AND ACTIVATING STATISTICA 14.0.1

Internal CZU guide · installation with a temporary 30-day licence · adding a valid licence file

This procedure is intended only for authorised CZU users.
Do not share the licence details (serial number, product key) or the **stat.lic** file with anyone else.

HOW THE PROCEDURE WORKS

A	**Installation with a temporary licence** You install the program using the serial number and product key. The installer creates a **temporary 30-day licence**.
B	**Adding a valid licence file** You replace the temporary licence with a valid **stat.lic** file from the licence administrator. Only then is the program permanently activated.

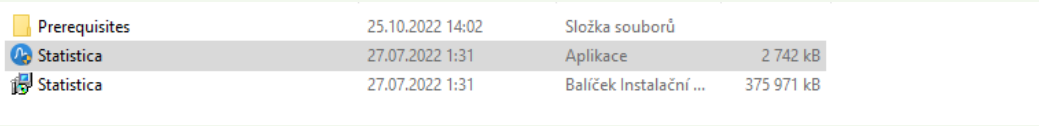

BEFORE YOU START

KEY	**Serial number and product key** You will find them on the internal SW-DOWNLOAD portal: https://czuvpraze.sharepoint.com/sites/SW-DOWNLOAD
LICENCE	**Valid stat.lic licence file** The licence administrator will provide the file. Save it to your computer.
ADMIN	**Administrator rights** The licence file is stored in the **Program Files** folder, which can only be written to with administrator rights.
VERSION	**Another version of the program** If another version of Statistica is installed, check its installation path in advance.

A INSTALLING THE PROGRAM WITH A TEMPORARY LICENCE

1 Run the installation file

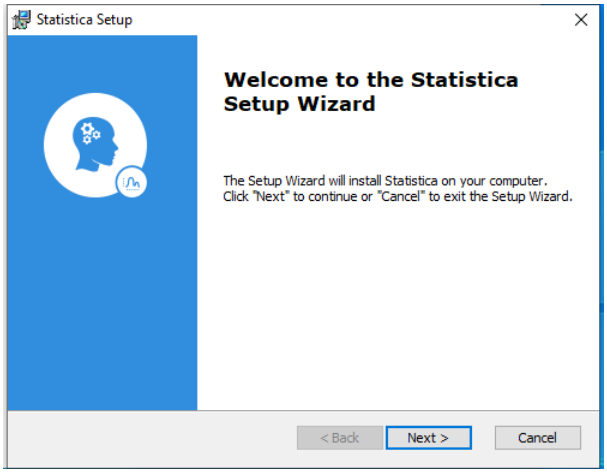

In the folder with the installation files, run the **Statistica** file of type **Application** (highlighted in the image).

Folder with the installation files (Czech Windows: "Aplikace" = Application).

2 Start the setup wizard

In the welcome window, click **Next**.

Setup wizard welcome screen.

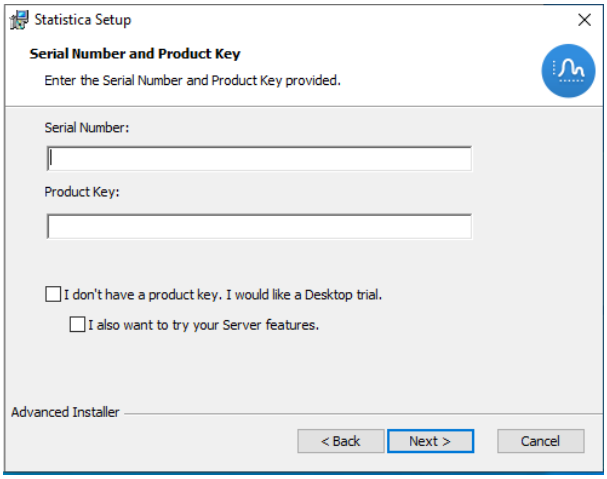

3 Enter serial number and product key

Fill in **Serial Number** and **Product Key** and click **Next**.

Do not tick the trial options (Desktop trial, Server features).

You will find the details on the SW-DOWNLOAD portal:

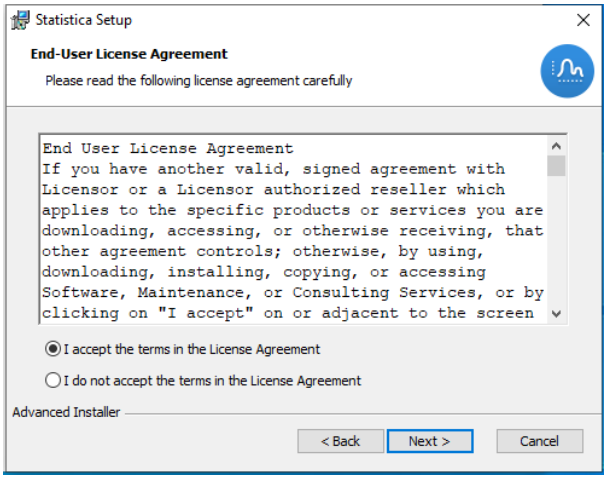

https://czuvpraze.sharepoint.com/sites/SW-DOWNLOAD

Entering the licence details.

4 Accept the licence terms

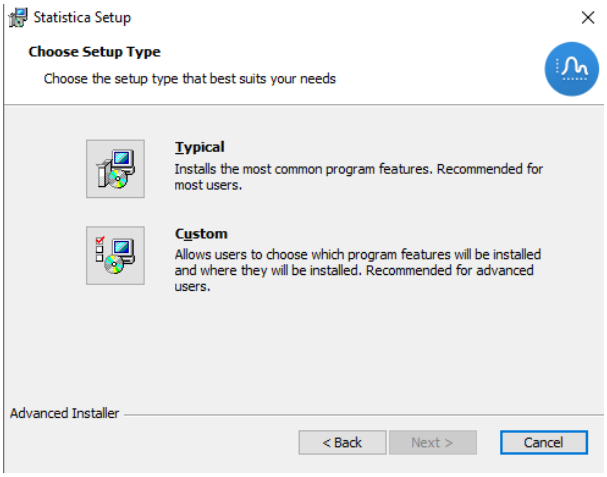

Select **I accept the terms in the License Agreement** and click **Next**.

Accepting the licence terms.

5 Choose the setup type

Choose **Typical** (recommended for most users) and continue with **Next**.

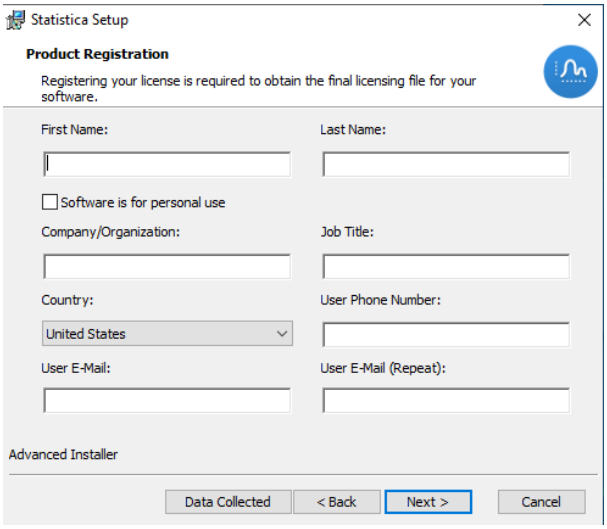

Setup type – this guide uses the Typical option.

6 Fill in the registration details

Enter your first name, last name, organisation, phone number and e-mail (the e-mail twice).

Under **Country**, change the preselected **United States** to the Czech Republic.

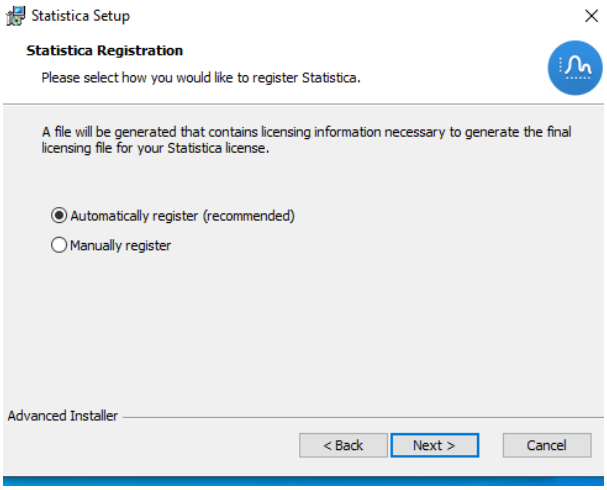

Continue with **Next**.

Registration details – check especially the e-mail, organisation and country.

7 Keep automatic registration

Leave **Automatically register (recommended)** selected and click **Next**.

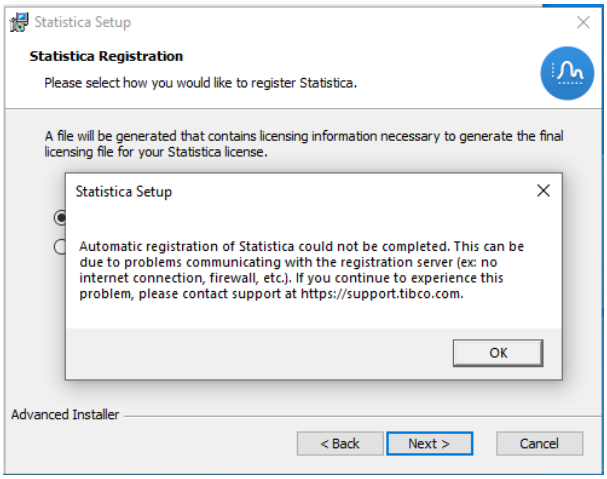

Choosing the registration method.

8 Confirm the registration message

If a message says that automatic registration could not be completed, click **OK** and then **Next** again.

This is not an installation error. The installer then creates a temporary 30-day licence, which you will replace with a valid licence file in part B.

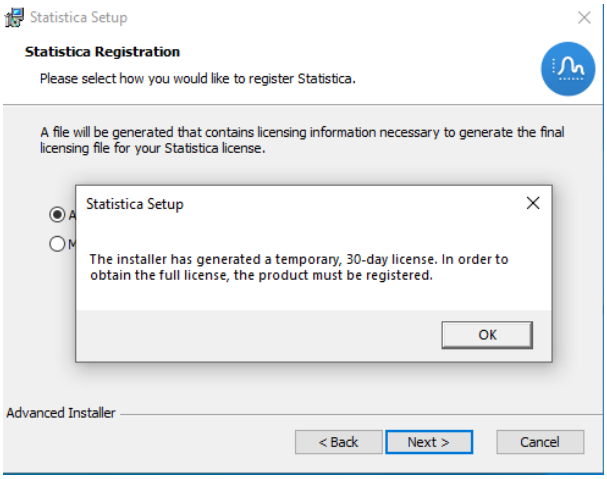

Message about incomplete automatic registration.

9 Confirm the temporary licence

When you are informed that a temporary 30-day licence has been created, click **OK**.

A temporary licence does not mean the program is permanently activated.

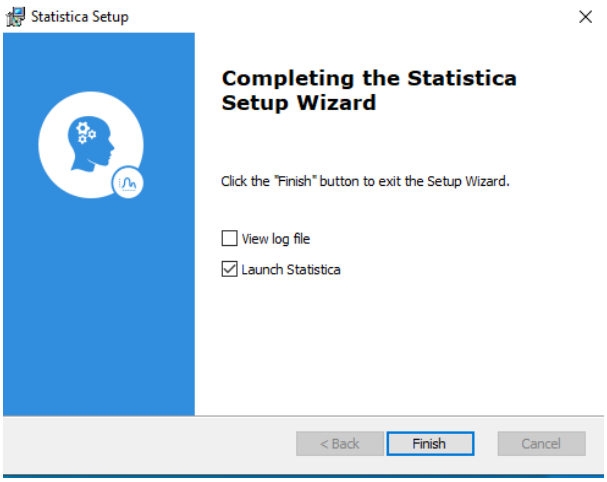

Information about the temporary licence.

10 Finish the installation

On the final screen, click **Finish**.

If **Launch Statistica** is ticked, the program starts automatically.

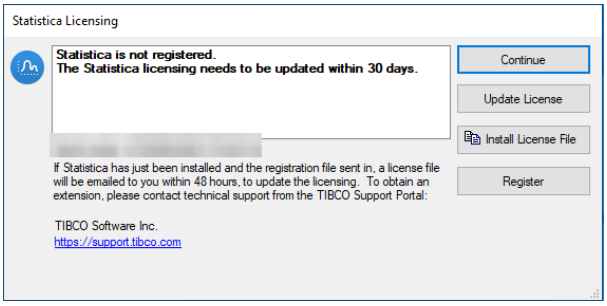

Completing the setup wizard.

11 Check that it runs in temporary mode

The program warns that it is not registered and the licence must be updated within 30 days.

Click **Continue** and check that the program starts. Then close it and continue with **part B**.

Temporary mode warning (the serial number is hidden in this guide).

B ADDING A VALID LICENCE FILE

Carry out the following steps only with a **valid licence file issued for your device** and according to the licence administrator's instructions.

1 Close Statistica

The program must be closed, otherwise the licence file may not be replaceable.

2 Open the program installation folder

Usual path: **C:\Program Files\TIBCO\Statistica**

The actual path may differ depending on the program version and the location chosen during installation.

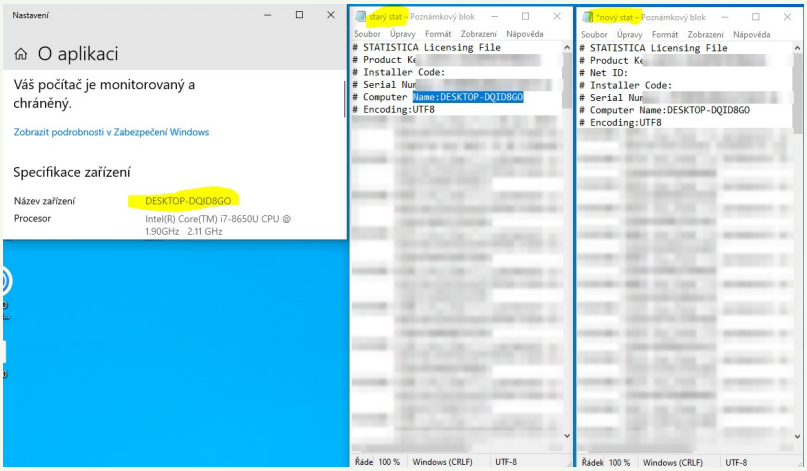

3 Back up the original stat.lic file

Copy the original file to another folder so that you can restore it if needed.

4 Check the Computer Name value

Open the new stat.lic file in Notepad and compare the **Computer Name** line with your device name (**Settings › System › About › Device name**). **The values must match.**

If they do not match, contact the licence administrator.

Device name in Windows (Czech interface) and Computer Name in the old and new stat.lic (licence details hidden).

Edit the stat.lic file only if the licence administrator has explicitly confirmed it.

Use **Notepad**, not Microsoft Word, to edit it – Word may add formatting or change the encoding, and the licence will then not work.

5 Copy the new stat.lic file to the installation folder

Replace the original file with it. If Windows asks for administrator permission, confirm it, or ask the Helpdesk to make the change.

6 Start Statistica and check the activation

- The temporary 30-day licence warning no longer appears.
- The program starts without a licence error.
- If the warning still appears, restore the backed-up file and contact the licence administrator or the Helpdesk.

QUICK CHECK AFTER INSTALLATION

- [ ] Statistica starts.
- [ ] No temporary licence warning is displayed.
- [ ] The new stat.lic licence file is saved in the installation folder.
- [ ] A backup of the original stat.lic file is safely stored.

NEED HELP?

The licence administrator will help you with the licence file; the Helpdesk will help with installation and administrator rights.
